

ENERGY SOLUTIONS Inc. Announces Launch of Solar Monitor in Malaysia

ENERGY SOLUTIONS Inc. announced that we will launch new service named "Solar Monitor" in Malaysia from this November. "Solar Monitor" is remote monitoring service that makes it possible to monitor all power generation and inverter to check all information in real time on the web site.

Product Overview

In Japan, The Solar Monitor has already installed over 2000 power plants(200MW) since launched February,2013.and Their rage is between 11kW~2.5MW.

ENERGY SOLUTIONS Inc is going to deploy and sell the Solar Monitor system in Malaysia from this November via TK International Sdn. Bhd.

Functions

1. Equipped with accurate power generation monitoring algorithm. The System will send alerts by e-mail at the time of error from each inverter's information.
2. Extensive reporting functions. Automatically sent in periodically mail generation report of daily, weekly monthly, yearly. Also the data output in CSV format and SEDA format.
3. Real-time monitor function with excellent design and diversity. It will provide digital signage that expresses such as calculated power generation forecast graphically from the current power and weather forecast. Can use PC or large screen and tablet devices web browser.
4. Collectively manage multiple solar power system. Can see at the list of power plants. Also can see digital information when click each power plants.
5. Inverter monitoring function. Can send an emergency alert e-mail in the event of failure.
